

2020/1 - NBS-4103B APPLIED BUSINESS PROJECT

Spring Semester, Level 4 module
(Maximum 500 Students)

UCU: 20

Organiser: Dr Kevan Williams

(UG) MODULE - 40% PASS ON AGGREGATE

Module Type: Coursework

Timetable Slot: B2/

The aim of the first year of your BA degree is to actively engage with the learning process so you can begin to become reflective and professional managers. We believe the best way to make this happen is to participate in an independent project which challenges you to solve a real world problem to which (unlike the exams which got you into university) there is no set solution! The project is designed to be as much like the 'real' business management world as possible; it has an uneasy beginning, a complex middle, and a difficult end. Student teams start the project as the owners of a new business; but are short of funding, market knowledge, accurate accounts, and a direction for the future. Several dummy businesses will be available to choose from. During a weekly seminar session, and in your own study time, you will have the chance to work on problem framing, personal development, and process reflection. Goals, measures, and direction are to be triggered by tutors but then framed and applied by the students. You can 'solve' the 'problems' anyway they like, but success (and your assessment) is ultimately dependant on consideration of what you have learned and have applied from the other 5 modules you take during the first year. You will also have a series of high level lectures which will help you develop you capacities to deal with project of this nature. Topics include: Team working, from theory to practice; Project management principles; evidence in academic Vs Practitioner contexts; Presentation Skills, and reflective & report writing. The module concludes with a 'live' and 'immersive' dragon's den style event.

2020/1 - NBS-4104B MANAGING DATA IN A DIGITAL WORLD

Spring Semester, Level 4 module
(Maximum 500 Students)

UCU: 20

Organiser: Dr Jack Whybrow

(UG) MODULE - 40% PASS ON AGGREGATE

Module Type: Coursework

Timetable Slot: F1

This module is about how data is central to business and to the academic study of business. This module will explore what is meant by data, the variety of forms that data takes, and the origin and lifecycle of data. The module considers the tools that organisations use to gather, store and manipulate data, including the use of spreadsheets. The module will introduce basic statistical concepts used in business research. Finally, the module will explore the interpretation of data in business and research contexts.

2020/1 - NBS-4105B PRINCIPLES OF MARKETING

decision-making. In addition, the mathematical theory behind how monetary values are affected by time (for example interest calculations, mortgages, net present values) and effective inventory control models will be explored. Your learning will be underpinned by relevant examples from the business world. Wherever relevant, you will be taught how to use a digital tool to perform these tasks. You will learn through a mixture of lectures, IT-based seminars and scenario-based seminars. You will be encouraged to communicate your findings both orally and in writing and to defend your assertions using sound quantitative reasoning. You will be assessed on your learning with a computer-based course test and a written examination. On successful completion of the module, you will have the knowledge and skills to assess relevant business problems in a quantitative manner, choose an appropriate method of analysis, perform the analysis and communicate your findings effectively. In addition, you will have knowledge of the mathematics that drives these methods allowing you to understand, build and analyse more complex situations.

2020/1 - NBS-5906B BUSINESS ETHICS

Spring Semester, Level 5 module
(Maximum 999 Students)

UCU: 20

Organiser: Dr Annilee Game

(UG) MODULE - 40% PASS ON AGGREGATE

Module Type: Coursework

Timetable Slot:TBC

BEFORE TAKING THIS MODULE YOU MUST (TAKE NBS-4005Y OR TAKE NBS-4011Y OR TAKE APCL-NBS-4) AND (TAKE NBS-4002Y OR TAKE NBS-4007Y OR TAKE NBS-4008Y OR TAKE APCL-NBS-4)
IN TAKING THIS MODULE YOU CANNOT TAKE NBS-5006Y

How do we know what is morally right and wrong in business? What new and complex ethical issues are raised by the globalisation of business? Questions like these are central to this module. In this module, you will learn about the nature, applications and consequences of ethics in business. You will discover why individuals sometimes make unethical business decisions. You will learn to use theoretical tools that help you to identify and analyse key ethical problems associated with business practice. You will also gain knowledge of practical approaches for managing business ethics in organisations. This module is ideal for those with an interest in corporate responsibility and sustainability. You will begin with an overview of what business ethics is and why it is important. You will go on to master the major ethical theories and concepts that form the core of business ethics. You will then build on these foundations to explore important business ethics issues – examples could include whistleblowing, environmental sustainability, corporate influence and/or others. You will discover how to use ethical theories to gain an in-depth understanding of whether, and to what extent, such issues are ethically problematic. You will also gain hands-on experience of applying ethical theories to business scenarios through a range of activities (e.g. role-play, small group exercises, and case study). You will learn through a combination of interactive lectures and seminars, and independent study. You will be assessed through coursework and an exam. By successfully completing this module, you will have new knowledge and skills that increase your ethical awareness and enable you to communicate your ideas clearly and systematically based on evidence. You will also be equipped with theoretical tools that will help you to identify and analyse ethical problems and make ethically justifiable decisions.

system. This will give you a strong basis should you wish to progress in your tax accounting studies and may also come in handy for calculating your own tax liability in the future!

2020/1 - NBS-6903B PERSONAL AND CORPORATE TAXATION

Spring Semester, Level 6 module

(Maximum 999 Students)

UCU: 20

Organiser: Mrs Loretta Bond

(UG) MODULE - 40% PASS ON AGGREGATE

Module Type: Examination

Timetable Slot:TBC

**BEFORE TAKING THIS MODULE YOU MUST TAKE NBS-5002Y
IN TAKING THIS MODULE YOU CANNOT TAKE NBS-6003Y**

How does the UK government raise money through taxes? There are several options available and in this module, you will consider the rationale behind the main types of tax and learn how to prepare tax computations. Some aspects of international tax will also be considered. You will develop knowledge of income tax, national insurance, corporation tax, capital gains tax and VAT. For each of these taxes you will learn how to set out computations and calculate tax payable. You will develop your analytical skills by considering how to reduce tax payable through tax planning and will look at the ethical issues around tax avoidance and evasion. You will be preparing tax computations for individuals, sole traders, partners and companies and will learn through lectures, seminars and self-study. As you progress, tasks will increase in complexity and you will compare different types of income and methods of taxation. On successful completion of this module, you will be able to complete detailed tax computations, apply tax-planning techniques and be able to explain the underlying principles of the UK tax system. This will give you a strong basis if you wish to progress in your tax accounting studies and may also come in handy for calculating your own tax liability in the future!
