

Behavioural experiment

Planning a behavioural experiment worksheet A

<p>✦ My thought to test out</p>	<p>How much I believe this thought (0-100%)</p> <input data-bbox="1268 616 1476 672" type="text"/>
--	--

<p>✦ What is the worst thing I think could happen?</p>	<p>How likely I think this is going to happen (0-100%)</p> <input data-bbox="1268 851 1476 907" type="text"/>
---	---

<p>✦ What is my alternative prediction of what could happen?</p>	<p>How likely I think this is going to happen (0-100%)</p> <input data-bbox="1268 1086 1476 1142" type="text"/>
---	---

<p>✦ Testing it out Consider different types of experiment plans before choosing one to plan out using the columns on the right. Which design may be best to use?</p> <ul style="list-style-type: none"> • Doing the experiment myself so I experience it? • Observing someone else doing it so I see what is happening around them? • A simulation experiment ? • A survey of other people, if so who and what do I need to ask? • Data gathering information e.g. from the internet or other sources, if so what do I need to gather and how do I make sure it is not biased? 	<p>When am I going to do it?</p>	<p>Where am I going to do it?</p>	<p>Do I need any one else to assist with it?</p>
--	----------------------------------	-----------------------------------	--

<p>✦ What may stop you? What internal or external things may get in the way of me doing it? What can I do to overcome these and carry out the plan? Is it the right design and practical for me to do?</p>

<p>✦ Testing it out What experiment I am going to do?</p>
