Transcript of Video 3

Data has been collected in the form of teachers' written responses to the Tasks and video-recorded group discussions in which these responses are further elaborated. Workshops on each site conclude teacher participation and open up issues that our Task design for subsequent (beyond this first year) phases of the project will focus on.

The 2014-15 research programme consisted of: two visits between UK and Brazil: one each way; from the UK, the PI and one team member (Biza); from Brazil, the Co-I and one Brazil team member (Fernandes); and, before, interim and post-visit work on: Task design, data collection and analysis; and, dissemination of results. Intra-regional collaboration is reinforced through a multilingual (English /Portuguese /Brazilian and British Sign Languages) website.
