

Dear Sir Muir,

I regret to say that the continued inclusion of Professor Boulton as a Member of your Panel fills me with disquiet - his background involvement with AGW research appears to be far from neutral.

Not only must justice be done, but it must also be seen to be done. You are in danger of producing a report, which will fail to gain widespread acceptance.

I would have thought any eminent scientist, regardless of background, would have been able to get to the bottom of the argument as to whether best scientific practice was undertaken at the CRU.

Yours sincerely,

Robert Wright
